of companies expect to be fully compliant

– Deloitte

80%

of US Firms may be effected by GDPR fines

– Computer Weekly

Understanding which business processes access Customer Data is imperative to identifying gaps and exposing risks

HOW CAN A BUSINESS CENTRIC PROCESS MODELING SOLUTION HELP?

It's all about data protection. The data in your systems (email, user data, etc.) needs to be protected. And this is much more than just an IT problem – it's a process problem. Businesses need to know where data is flowing and then have the right controls in place to make sure data is protected – it must be analyzed from the process perspective in order to avoid breaching and paying hefty fines. A company like iGrafx brings to the table the intellectual property of knowing the regulatory elements of GDPR, as well as a survey tool to assess risk, then the ongoing system to document, model and audit controls in perpetuity.
